

GIT FOUNDATION COHORT SYLLABUS

Weekday live cohort | Monday to Friday | Online mentorship program

SYLLABUS

DON'T JUST LEARN GIT.

Learn how developers actually manage, track, and collaborate on code.

A foundation-level live cohort for beginners, students, working professionals, career transitioners, and self-learners who want to understand Git deeply from scratch.

2-3

Weeks

20

Seats Max

Live

Weekday Batch

Meet

Online Sessions

WHO IT IS FOR

- Beginners starting from zero
- Students preparing for internships/jobs
- Working professionals who want practical Git knowledge
- Career transitioners entering IT
- Developers who know coding but struggle with Git

WHAT YOU WILL ACHIEVE

- Understand why Git exists
- Track code changes confidently
- Recover previous versions safely
- Work with branches without fear
- Collaborate with teams using GitHub
- Understand industry workflow

HOW IT IS DELIVERED

- 1 hour live class (Monday to Friday)
- Online live sessions through Meet
- Practical local Git setup
- Daily hands-on exercises
- Session recordings on portal
- Personal mentorship and doubt support

COURSE PROMISE

By the end of this cohort, students will be able to use Git confidently in projects, understand version control deeply, work with branches safely, and collaborate using real industry workflows - without blindly memorizing commands. Understanding first. Commands second.

INCLUDED IN THE PROGRAM

- Live mentorship and accountability
- Real-life analogy based teaching
- Practical local Git execution
- Guided exercises and assignments
- Doubt clearing in live sessions
- Session recordings on portal

COHORT FORMAT

- Weekday live batch
- Monday to Friday learning rhythm
- Beginner-friendly from zero
- Limited to 20 learners
- Practical hands-on practice

ENROLL NOW - LEARN GIT THE RIGHT WAY

Trainer: Shivam Namdev

7+ years of IT industry experience

GIT FOUNDATION COHORT SYLLABUS

A structured roadmap from Git confusion to Git confidence

SYLLABUS

CURRICULUM ROADMAP

Strong understanding first. Commands next. Real workflow after.

WEEK 1

Why Git Exists

- Life before Git (version chaos)
- Why developers struggled before Git
- What problems Git solves
- Version control fundamentals
- Git as a Time Machine

Outcome: Understand the purpose of Git before using it.

WEEK 2

Core Git Workflow

- Repository concept
- Working directory
- Staging area
- Commits as snapshots
- Tracking history
- Undoing mistakes safely

Outcome: Use Git locally with full confidence.

WEEK 3

Branches, Merging & Collaboration

- Branching with real-life analogy
- Parallel development workflow
- Merge conflicts and resolution
- Why GitHub exists
- Push, Pull, Clone, Pull Requests
- Real company workflow

Outcome: Collaborate like real software teams.

HOW YOU WILL LEARN

Analogy-based teaching
Scenario-driven learning
Practical live execution
Guided debugging
Real-world workflow simulation
Mentor feedback
Doubt support

BONUS ACCESS

Industry Workflow Mastery

Feature branch workflow
Pull request lifecycle
Team collaboration flow
Code review understanding
Merge conflict handling mindset

CERTIFICATE ELIGIBILITY

Minimum 75% attendance
Daily practice completed
Final workflow simulation completed
Active participation and consistency

FINAL WORKFLOW SIMULATION

You will practice a simplified company-style workflow: clone a project, create a feature branch, commit changes, push to GitHub, raise a pull request, and understand how review/conflict scenarios are handled.

Final transformation: You won't just know Git commands - you'll understand how real developers think, track, and collaborate using Git.
